DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-8, in the reply filed on 1/10/2008 is acknowledged.
2. Claims 9-23 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/10/2008.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 3, 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Alig et al. (U.S. Patent No. 5,594,060).

Alig et al. is drawn to a vapor grown carbon fiber with an initial bulk density of 0.0016 g/cm³ (col. 3 lines 39-41) and a diameter of 20-800 nm (col. 3 lines 36-39).

5. Claims 3, 5-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Morita et al. (U.S. Pre-Grant Publication 2002/0146562 A1).

Morita et al. discloses a vapor grown carbon fiber with a bulk density of about 0.01 g/cm^3 (paragraph [0047]), a diameter of about 1-1000 nm (paragraph [0043]), a compressed bulk density of 0.8 g/cm^3 (paragraph [0060]), and a specific resistance of $0.01 \Omega \cdot \text{cm}$ (Table 1).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Baker et al. (U.S. Patent No. 5,413,866), Tibbetts et al. (U.S. Patent No. 5,413,773).

7. Claims 3, 5-8 have been rejected.

8. Claims 1, 2, 4, and 5-8 that depend from independent claims 1 and 2, have not been rejected under either 35 U.S.C. 102 or 35 U.S.C. 103 because the limitations of these claims are not taught in Alig et al., Morita et al., or any of the other references of record.
